

Open Modes for fopen()

- "r" - open for reading only
- "w" - create for writing; if a file by that name already exists, it will be overwritten
- "a" - append; open for writing at end-of-file or create for writing if the file does not exist
- "r+" - open an existing file for update from beginning (reading and writing)
- "w+" - create a new file for reading and writing; if a file by that name already exists, it will be overwritten
- "a+" - open for append; open (or create if the file does not exist) for update at the end of the file
- add a "b" to the end if you want to use binary files instead of text files, like this: "rb", "wb", "ab", "r+b", "w+b", "a+b"
